National Climate Education Action Plan and ITT

2. All teacher trainers and initial teacher trainees should be able to access training that empowers them to effectively incorporate climate education within their teaching across all levels and subjects.

Climate in the Classroom

St Mary's
University
Twickenham
London
School of
Education

Session overview/aims

Session A1 (University input)
and Session A2 (School input)

Teacher Positionality

Provoking thought/overview on why we are asking these questions on climate change. Use key phrases to support learners to critically engage with new information as it emerges - key questions' relating to 'What is my positioning as a teacher?'

Session B1 (University input)
and Session B2 (School input)

Climate Justice

Exploring 'What is climate justice?' Examine the intersectionality of climate justice and its impact on individuals (UN, 2015).

Session C1 (University input)
and Session C2 (School input)

Climate Action - personal and collective

Encouraging personal action from both ITT students and pupils. How personal action can ripple out into collective local, national, and international action. (DfE, 2021)

Wider LA areas will be ‘more flammable’ due to climate change, study finds

Climate change caused primarily by fossil fuel burning had increased the likelihood of the California fires, scientists say

Homes destroyed in Pacific Palisades, California. Santa Barbara, Ventura, Orange and San Diego counties also face increasing chances of wildfires, scientists say © Getty Images

Attracta Mooney in London JANUARY 28 2025

Scientists have warned wider areas of Los Angeles will become “**more flammable**” as **temperatures rise**, after finding the ferocious fires that killed at least 28 people and **destroyed 16,000 buildings** were made more than one-third worse by the conditions caused by climate change.

Climate stripes

Representing global temperature rise over two centuries

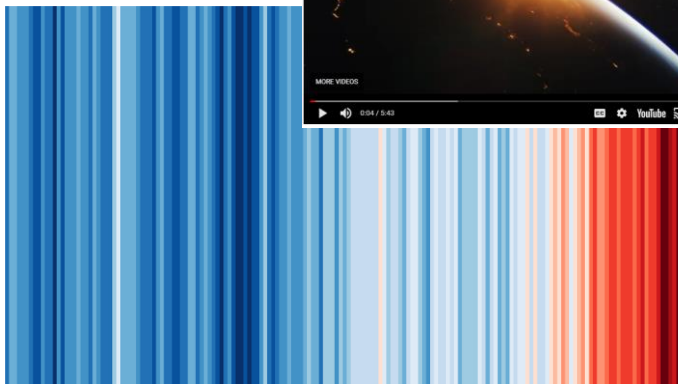

What are the stripes?

No words. No numbers. No graphs. Just a series of vertical coloured bars, showing the progressive heating of our planet in a single, striking image.

The climate stripes were **created by Professor Ed Hawkins** at the University of Reading in 2018.

They show clearly and vividly how global average temperatures have risen over nearly two centuries,

CO₂ Emissions 2020

|| We simply must do everything we can in our power to slow down global warming before it is too late... The science is clear. The global warming debate is over.

Arnold Schwarzenegger 2009

What is meant by **climate justice**?

INTRODUCING CLIMATE CHANGE

This section introduces some of the **complexities of teaching about climate**.

Climate change is a **global issue** characterised by **significant changes in temperature, weather patterns, and sea levels**. Recent changes are primarily due to **increased levels of greenhouse gases** in the atmosphere.

Activity: Explore the following information and links about temperature, sea level and gas emissions to help you in understanding climate change.

– **Global Temperature Rise:** One of the most direct indicators of climate change is the increase in global temperatures. Over the past century, **Earth's average temperature has risen**, with recent years marking some of the warmest on record. This trend is a clear signal of the ongoing impact of increased greenhouse gas emissions. **Explore global surface temperature**

– **Rising Sea Levels:** Climate change contributes to rising sea levels, primarily due to the **melting of polar ice caps and glaciers**, and the **thermal expansion of seawater** as it warms. Rising sea levels pose significant risks to coastal communities, including increased flooding and erosion. **Understanding sea level**

– **Greenhouse Gas Emissions:** The increase in greenhouse gases like carbon dioxide (CO₂) is a primary driver of climate change. These emissions come from various sources, including the burning of fossil fuels, deforestation, and industrial processes. Monitoring the levels and sources of these emissions is crucial for understanding and mitigating climate change. **Explore the Carbon Map**

Activity: To find out more about climate change and its impacts, explore the seven chapters of the *Climate Factbook* (opens in a new page), designed to help clarify the issues for educators.

Activity: Now explore these interesting resources on climate change. Consider how you might use them in your classroom

- **How do we know climate change is real?**
- **Climate Science for teachers**
- **Addressing the climate crisis**
- **Vital signs of the planet**

Useful resources for schools and teachers have been catalogued by the TECCHED Erasmus Plus project.

Activity: Visit the *TECCHED project* and explore some of these resources

Thousands call for 'climate reparations and justice' in global protests

Fridays for Future 'strikes' in about 450 places demanded rich countries pay for damage from global heating

📷 The biggest Fridays for Future protest was in Berlin, where 20,000 people were estimated to have participated. Photograph: Christian Mang/Reuters

Thousands of young people have staged a coordinated "global climate strike" across Asia, Africa and Europe in a call for reparations for those worst affected by climate breakdown.

From New Zealand and Japan to Germany and the Democratic Republic of Congo, activists walked out of schools, universities and jobs to demand rich countries pay for the damage global heating is inflicting on the poor.

OXFAM IS CALLING ON WEALTHY COUNTRIES TO:

- ➔ **Reduce their greenhouse emissions the fastest and furthest**, as they are historically responsible for the crisis and have the resources to do so.
- ➔ **Provide financial and technical support to low-emitting, low-income countries** that have contributed the least to the crisis and lack resources. This support should:
 - Help the most affected people adapt to the impacts of the climate crisis.
 - Help them benefit from new renewable energy technologies.
 - Pay for losses and damages caused by the climate crisis.

1 WHAT IS THE CLIMATE CRISIS?
What is the climate crisis and what has caused it?

2 HOW DOES THE CLIMATE CRISIS AFFECT US?

Is the impact the same for everyone?

What is the link between the climate crisis and inequality?

3 WHAT CAN WE DO ABOUT THE CLIMATE CRISIS?

How are governments addressing the climate crisis?

What more could governments do?

What can I do to help people and the planet?

4 SO, WHAT NOW?

The climate crisis is a global problem and we all need to be part of the solution. We must take action as individuals, and collaborate at local, national and international levels.

It's not fair
that our ability to cope with the **climate crisis** is based on where we live, the resources we have available, and the value society places on **our lives.**

COP30 TAKES A HOPEFUL STEP TOWARDS JUSTICE, BUT DOES NOT GO FAR ENOUGH

22 November 2025

Climate Action Network International (CAN) welcomes the adoption of the Just Transition mechanism as one of the strongest rights-based outcomes in the history of the UN climate negotiations. At the same time, CAN warns that COP30 has produced weak outcomes in the very areas that are critical to ensuring justice for vulnerable and frontline communities. A dangerously weak outcome on Adaptation finance leaves little hope for impacted communities.

TACKLING THE CLIMATE CRISIS

Climate Action Network (CAN) is a global network of more than 1,900 civil society organisations in over 130 countries driving collective and sustainable action to fight the climate crisis and to achieve social justice. CAN convenes and coordinates civil society at the UN climate talks and other international fora.

FACTSHEET

Global Warming

Global warming is the increase of average world temperatures as a result of what is known as the greenhouse effect.

Introduction
Causes
Other Greenhouse Gases
Feedback Process
Effects
What can be Done?
Credits

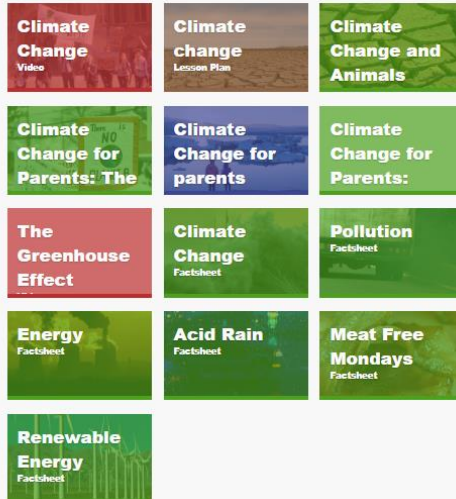

What can be Done?

It is important to slow the warming as much as possible. This means using less fossil fuel, eliminating CFCs altogether, and slowing down deforestation.

This can be achieved best through energy conservation, including better use of public transport and cleaner, more efficient cars; and energy efficiency by greater use of gas which produces less CO2 than coal and oil, and through renewable energy such as solar power. We need to stop destroying rain forests (deforestation) and start replanting trees (afforestation) to soak up carbon dioxide.

GUEST POSTS Guest post: An Indigenous peoples' approach to climate justice

This guest post is by:
Prof Deborah McGregor,
associate professor and
Canada research chair in

Climate change has been identified as the “defining issue of our time” by many of the world’s leading experts and the diagnosis of planetary health is dire.

Climate Justice

This article is part of a week-long special series on climate justice.

- [Analysis: In-depth Q&A: What is ‘climate justice’?](#)
- [Analysis: Which countries are historically responsible for climate change?](#)
- [Analysis: The lack of diversity in climate-science research](#)
- [Climate justice: The challenge of achieving a ‘just transition’ in agriculture](#)
- [Experts: Why does ‘climate justice’ matter?](#)
- [Researchers: The barriers to climate science in the global south](#)

Fragility of our planet!

Issues relating to decolonisation and therefore racial justice and climate change. This is a key climate justice issue in this debate, both locally and internationally.

It is also critical to discuss **local climate justice issues** and develop **debate** around this, e.g. **air pollution** and the impact this has on **individual health and wellbeing**. These are **sensitive issues**; therefore, the input at University will need to reflect this to support delivery

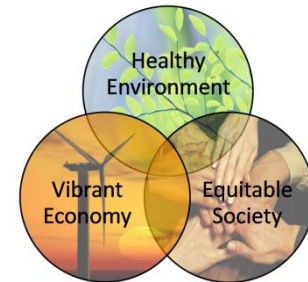

Why did you remove me from the photo?

I was part of the group!

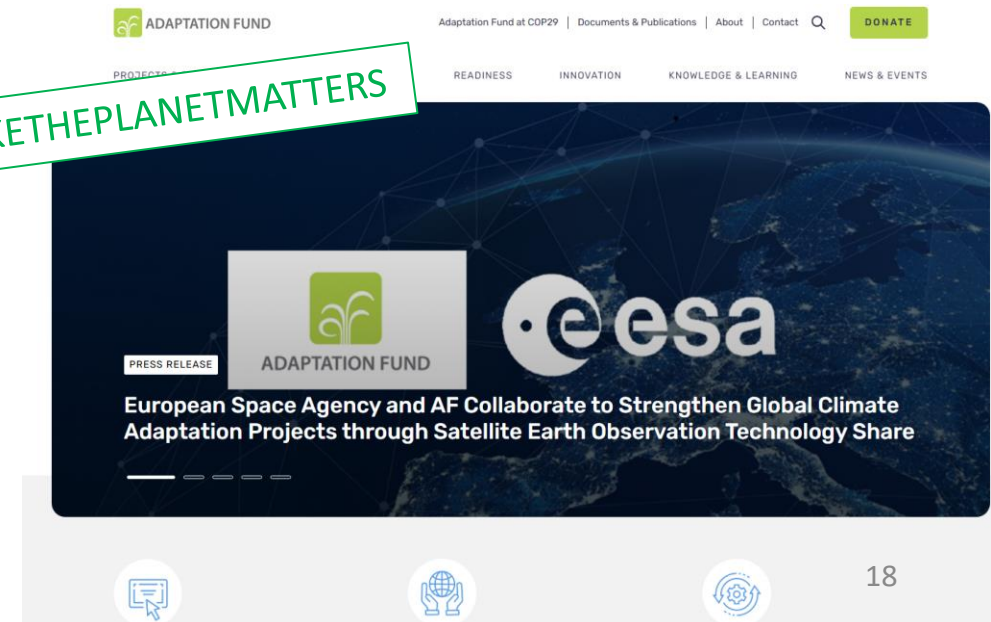

Climate justice can't happen without racial justice

Engagement

'Sister' Projects

Regional Hubs

#TEACHLIKETHEPLANETMATTERS

DECARBONISATION

Calculating and taking actions to reduce carbon emissions. Example actions:

- 'Switch-off' behaviour change campaign
- Draft proof buildings to reduce heat loss
- Encourage active travel by students and staff
- Reduce food waste by composting

Decarbonisation

ADAPTATION AND RESILIENCE

#TEACHLIKETHEPLANETMATTERS

Adaptation means changing our behaviours and infrastructures to cope with a changing climate. Examples include:

- Planting trees to increase shaded areas on your school site
- Add solar control film to windows that receive the most sunlight
- Install sustainable drainage system (SuDS) planters to reduce the risk of flooding

Adaptation and resilience

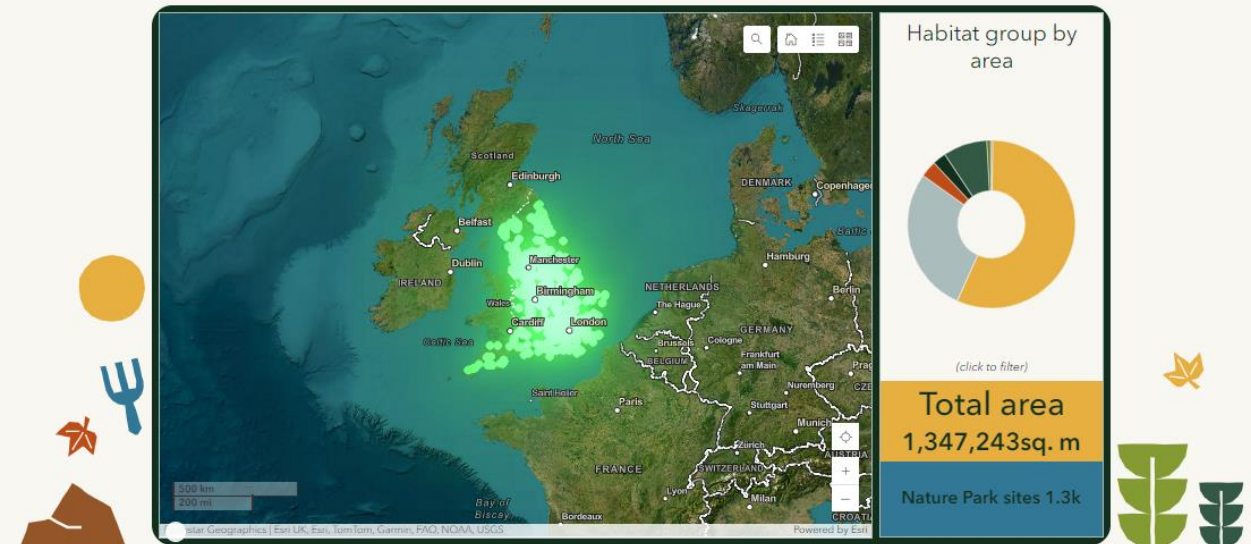

BIODIVERSITY

Increasing biodiversity can **mitigate against climate change** and has huge **benefits to personal health and wellbeing**. Example actions:

- Sign up to the [National Education Nature Park](#)
- Plant new trees and hedgerows
- Repurpose an unused area of land into a wildflower meadow or vegetable patch and bug hotel

The National Education Nature Park

This map displays the growing network of nurseries, schools and colleges taking part in the Nature Park, and working together to improve their sites for nature. If all education settings in the country took part, **we could create a space twice the size of Birmingham for wildlife to thrive in**. Add yourself to the map and [register now](#).

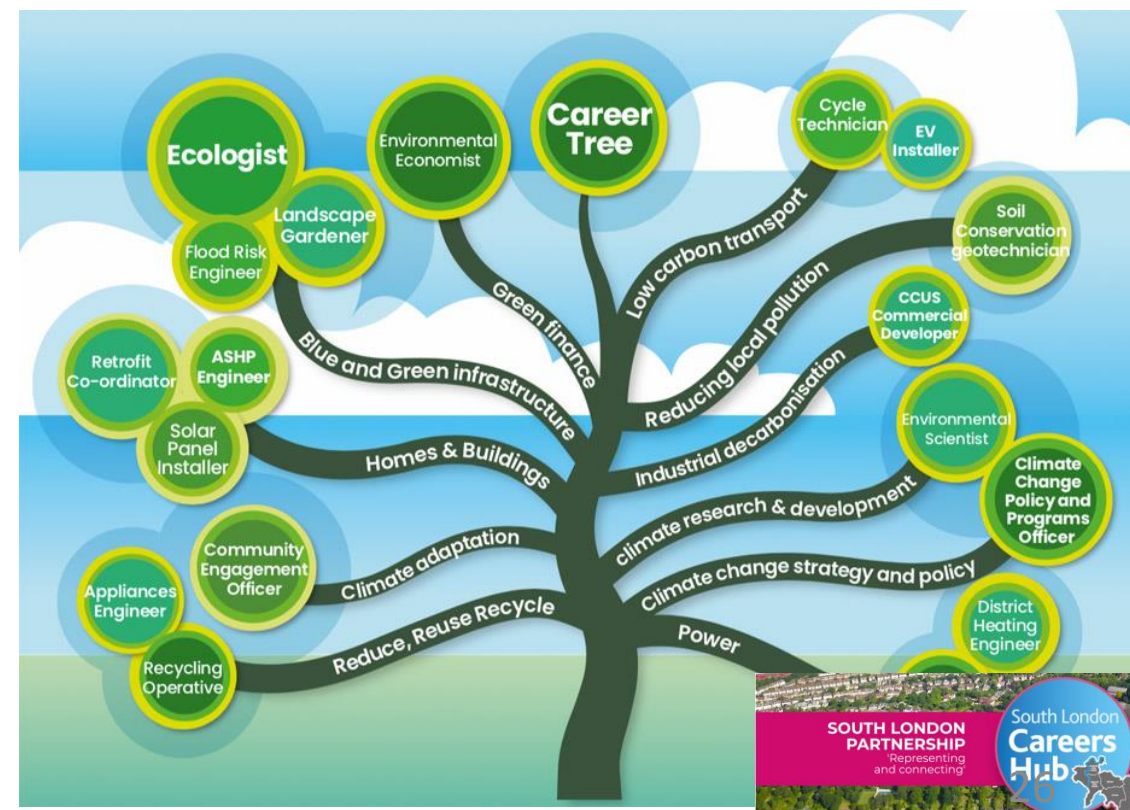

CLIMATE EDUCATION AND GREEN CAREERS

#TEACHLIKETHEPLANETMATTERS

We need to **prepare young people with the right skills to support a more sustainable future.** Example actions:

- Provide staff with CPD on climate change and sustainability
- Embed climate change across a range of subject by making small tweaks to the existing curriculum
- Hold a careers event dedicated to Green Careers

Climate education and green careers

KEY QUESTIONS / Reflections?

#TEACHLIKETHEPLANETMATTERS

- ☐ What impact does the climate emergency have on women?
- ☐ What role does education play in supporting young people to learn about the human impact of the climate crisis around the world?
- ☐ How can this link to *classroom activities and *curriculum ideas?
- ☐ What role does social action play when working with young people?
