Hi Rob,

This is from breakout room 4:

Q1)
How would you describe a population in an ecosystem?

- A count of all living organisms in an ecosystem.
- A count of one specific species in an ecosystem.
- A count of all the living organisms in a species.
- The most common organism in the ecosystem.

Q2)
The boiling point of Ethanol is 78 degrees C, so at 90 degrees c which state of matter will it be in?

- Solid
- Liquid
- Gas

Thanks,
Joel

A ball is thrown straight up, in which direction does it experience acceleration?
 a) up
 b) down
 c) no acceleration
 what is a placebo?
 - placebo is a fake medicine
 - placebo is a real medicine
 - placebo is a psychological state of mind
 What happens in respiration?
 - energy is produced
 - energy is released
 Does diffusion require energy?
 a) complimentary
 b) inversion
 c) complementary
 d) lock and key

Guess my weight
 - elicit student responses along the lines of '70kg' etc.
 - use to introduce Newtons and the difference between mass and weight
 Diagnostic diagrams
 - e.g. IOP 'draw an arrow' for specific forces
 Why can't we hear sound in space?
 - no gravity
 - no air
 - too many other noises
 -
 What word means one shape will fit into another?
 a) complimentary
 b) inversion
 c) complementary
 d) lock and key
 How does heat transfer?
 a) From cold objects to hot objects.
 b) From hot objects to cold objects.
 c) Both ways equally.

Cells

Transport across membranes

When a potato is put in pure water it increases in mass. Which of the following best describes why:

A) water molecules are attracted to the potato

B) water moves down its' water potential gradient from high water potential to low water potential into the potato cells

C) water will always move into a plant cell

D) the plant cells in the potato need water so will absorb water and the potato will become heavier

E) water will move from a high concentration to a low concentration into the potato
